SENATE

REPORT 114-000

ENERGY AND WATER DEVELOPMENT APPROPRIATIONS BILL, 2016

MAY ----, 2015.-Ordered to be printed

Mr. ALEXANDER, from the Committee on Appropriations, submitted the following

REPORT

[To accompany S. 0000]

The Committee on Appropriations reports the bill (S. 0000) making appropriations for energy and water development and related agencies for the fiscal year ending September 30, 2016, and for other purposes, favorably thereon and recommends that the bill do pass.

New obligational authority

Total of bill as reported to the Senate	
Amount of 2015 appropriations	34,780,277,000
Amount of 2016 budget estimate	36,646,014,000
Amount of House allowance	36,010,658,000

PURPOSE

The purpose of this bill is to provide appropriations for fiscal year 2016, beginning October 1, 2015, and ending September 30, 2016, for energy and water development, and for other related purposes. It supplies funds for water resources development programs and related activities of the Corps of Engineers' civil works program in title I; for the Department of the Interior's Bureau of Reclamation in title II; for the Department of Energy's energy research activities, including environmental restoration and waste management, and atomic energy defense activities of the National Nuclear Security Administration in title III; and for independent agencies and commissions, including the Appalachian Regional Commission, Delta Regional Authority, Denali Commission, and the Nuclear Regulatory Commission in title IV.

SUMMARY OF ESTIMATES AND RECOMMENDATIONS

The fiscal year 2016 budget estimates for the bill total \$36,646,014,000 in new budget (obligational) authority. The recommendation of the Committee totals \$36,118,168,000. This is \$527,846,000 below the budget estimates and \$1,337,891,000 above the enacted appropriation for the current fiscal year.

SUBCOMMITTEE HEARINGS

The Appropriations Subcommittee on Energy and Water Development held four sessions in connection with the fiscal year 2016 appropriations bill. Witnesses included officials and representatives of the Federal agencies under the subcommittee's jurisdiction.

The recommendations for fiscal year 2016, therefore, have been developed after careful consideration of available data.

VOTES IN THE COMMITTEE

By a vote of —— to —— the Committee on ————, recommended that the bill, as amended, be reported to the Senate.

INTRODUCTION

The Committee recommends \$35,368,000,000 for the Energy and Water Development appropriations bill for fiscal year 2016, including adjustments, an increase of \$1,165,723,000 over fiscal year 2015. Within the amount recommended, \$19,002,000,000 is classified as defense and \$16,366,000,000 is classified as non-defense spending. The Committee recommendation complies with the Budget Control Act of 2011, as amended.

The Committee's constitutional responsibility to oversee the Federal Government's expenditure of taxpayer dollars requires setting priorities and ensuring these funds are executed as Congress has

directed. To develop this recommendation, the Committee held four budget hearings in March and April 2015 to examine the budget requests for the Corps of Engineers, Bureau of Reclamation, Department of Energy, National Nuclear Security Administration, and the Nuclear Regulatory Commission. The hearings provided officials from the agencies an opportunity to present their most pressing priorities to the Committee. The Committee also invited and received recommendations from Senators.

The Committee's recommendation reflects that process, and includes funding for the highest priority activities across several Federal agencies. The recommendation includes funds for critical water infrastructure, including our Nation's inland waterways, ports, and harbors; agricultural water supply and drought relief in the West; groundbreaking scientific research and development, including world-class supercomputing; support for the Nation's nuclear weapons, non-proliferation, and nuclear Navy programs; and critical economic development. The Committee did not recommend funding for low-priority programs, and rescinded unused funds from prior years.

OVERSIGHT

To ensure appropriate oversight of taxpayer dollars, the Committee's recommendation includes financial reporting requirements in each title of the bill, and provides additional Congressional control points in the recommendation for the Nuclear Regulatory Commission. The Committee describes these new requirements in detail in the relevant sections.

TITLE I

DEPARTMENT OF DEFENSE—CIVIL

DEPARTMENT OF THE ARMY

CORPS OF ENGINEERS—CIVIL

OVERVIEW OF RECOMMENDATION

The Committee recommends \$5,499,500,000 for the Corps of Engineers, an increase of \$767,500,000 from the budget request. The Committee also recommends rescinding \$128,000,000 of unobligated prior year balances, for a net appropriation of \$5,371,500,000.

The Committee recommendation sets priorities by supporting our Nation's infrastructure. Specifically, the Committee recommendation provides adequate appropriations to utilize all of the estimated fiscal year 2016 revenues from the Inland Waterways Trust Fund and meets the target prescribed in the Water Resources Reform and Development Act [WRRDA] of 2014 for projects eligible for Harbor Maintenance Trust Funds. This level of funding will help modernize our Nation's ports and waterways as we prepare for completion of the Panama Canal expansion.

INTRODUCTION

The Corps of Engineers' civil works mission is to provide quality, responsive engineering services to the Nation in peace and war. Approximately 23,000 civilians and about 290 military officers are responsible for executing the civil works mission. This bill only funds the civil works functions of the Corps of Engineers.

The Corps of Engineers maintains our inland waterways, keeps our ports open, manages a portion of our drinking water supply, provides emission free electricity from dams, looks after many of our recreational waters, helps manage the river levels during flooding, provides environmental stewardship, and emergency response to natural disasters. The annual net economic benefit generated by the Corps of Engineers' civil works mission is estimated to be \$87,000,000,000, which equates to a return of about \$16 for every \$1 expended.

The Corps of Engineers' responsibilities include:

- —navigation systems, including 13,000 miles of deep draft channels, 12,000 miles of inland waterways, 236 lock chambers, and 926 harbors which handle over 2.3 billion tons of cargo annually;
- —flood risk management infrastructure, including 707 dams, 14,700 miles of levees, and multiple hurricane and storm damage risk reduction projects along the coast;

- —municipal and industrial water supply storage at 136 projects spread across 25 States;
- —environmental stewardship, infrastructure, and ecosystem restoration;
- —recreation for approximately 370 million recreation visits per year to Corps of Engineers' projects;
- -regulation of waters under Federal statutes; and
- —maintaining hydropower capacity of nearly 24,000 megawatts at 75 projects.

PROGRAM COORDINATION AND EXECUTION

The Committee expects the Corps of Engineers to execute the civil works program in accordance with congressional direction included in this report and the accompanying act. This includes moving individual projects forward in accordance with the funds annually appropriated. However, the Committee realizes that many factors outside the Corps of Engineers' control may dictate the progress of any given project or study. The Committee directs the Corps of Engineers to notify the Committee of any major deviations as soon as practicable, including a detailed justification and updates of cost, schedule, or scope for the project or study. A major deviation is defined as any reprogramming action that requires Committee notification as identified in the Energy and Water Development and Related Agencies Appropriations Act, 2015, or a schedule change that causes completions, as identified in the fiscal year 2015 or fiscal year 2016 budget requests to be delayed beyond the fiscal year stated.

FISCAL YEAR 2016 WORK PLAN

The Committee has recommended funding above the budget request for Investigations, Construction, Operations and Maintenance, and Mississippi River and Tributaries. The Corps of Engineers is directed to submit a work plan, not later than 45 days after the date of enactment of this act, to the Committee proposing its allocation of these additional funds. The Corps of Engineers is directed not to obligate any funding above the budget request for studies or projects until the Committee has approved the work plan for fiscal year 2016. The work plan shall be consistent with the following general guidance, as well as the specific direction the Committee provides within each account.

- —None of the funds may be used for any item for which the Committee has specifically denied funding.
- —Except for funds proposed for new starts, the additional funds are provided for ongoing studies or projects that were either not included in the budget request or for which the budget request was inadequate.
- —The work plan shall include a single group of new starts for Investigations and Construction.
- —Funding associated with a category may be allocated to eligible studies or projects within that category.
- —Funding associated with a subcategory may be allocated only to eligible studies or projects within that subcategory.

—The Corps of Engineers may not withhold funding from a study or project because it is inconsistent with the administration's policy

—The Committee notes that these funds are in excess of the administration's budget request, and that administration budget metrics should not disqualify a study or project from being funded.

PROCUREMENT

The Committee remains concerned about the high unemployment rate of the Nation's construction industry. Despite the efforts of the Office of Federal Procurement Policy to increase communication between procurement officers and industry, the Committee believes that local contractors very often do not know about nor have the opportunity to compete for local construction projects funded in this act. Therefore, the Committee directs the Secretary to ensure that regional/district offices responsible for construction projects inform and engage local construction industry contractors, especially small businesses, minority-owned businesses, and women-owned businesses, about Federal procurement opportunities and the bidding process. The Committee requests a clear outreach plan from the Secretary no later than 90 days after enactment of this act. This plan should modernize traditional outreach methods to reach a broader group of local contractors.

REPROGRAMMING

The Committee is retaining the reprogramming legislation provided in the Energy and Water Development and Related Agencies Appropriations Act, 2015.

NEW STARTS FOR FISCAL YEAR 2016

The Committee recommends new starts in both the Investigations and Construction accounts for fiscal year 2016. The Committee decision is based, in part, on the budget request providing funding to complete 11 feasibility studies, 2 preconstruction engineering design [PED] studies, and 9 construction projects.

Investments in our infrastructure are investments in our economy. These investments should be continued even during constrained budgets, as the benefits continue to accrue for decades. The Committee recommends up to 10 new feasibility study starts, and 6 new construction starts, including the following 4 proposed in the administration's budget request for fiscal year 2016: Port Lions Harbor, Alaska; Coyote & Berryessa Creeks, California; Ohio River Shoreline, Paducah, Kentucky; and, Marsh Lake, Minnesota. The Corps of Engineers is directed to propose, not later than 45

The Corps of Engineers is directed to propose, not later than 45 days after the date of enactment of this act, a single group of new starts to the Committee as a part of the work plan, under the direction included above under the heading "Fiscal Year 2016 Work Plan".

SAVINGS AND SLIPPAGE

Savings and slippage [S&S] is a budgetary term that recognizes that nothing ever goes completely as planned. The Committee rec-May 19, 2015 (4:52 p.m.)

ognizes that many changes may occur between the Corps of Engineers' budget formulation—beginning 22 months before it is submitted to the Committee—and when funds are actually appropriated. Although the Committee has attempted to identify and address changes through coordination with the Corps of Engineers, the Committee realizes that actual appropriations may not be enacted until later in the year. Accordingly, the Committee has included, as in prior years, a reasonable percentage of S&S within Investigations, Construction, and Operations and Maintenance as a way to accommodate additional project needs, even if funding is insufficient. Upon applying the S&S amounts, normal reprogramming procedures should be undertaken to account for schedule slippages, accelerations, or other unforeseen conditions.

CONGRESSIONALLY DIRECTED SPENDING

The Committee did not accept or include Congressionally Directed Spending, as defined in section 5(a) of rule XLIV of the Standing Rules of the Senate. However, the Committee has recommended additional programmatic funds for Investigations, Construction, Operations and Maintenance, and Mississippi River and Tributaries to address deficiencies in the budget request. In some cases, these additional funds have been included within defined categories, as in prior years, and are described in more detail in their respective sections, below.

ECONOMIC IMPACT STUDY

The Comptroller General of the Government Accountability Office is directed to study the cumulative economic impact of all the shallow draft ports on the Mississippi River between St. Louis, Missouri, and Baton Rouge, Louisiana. The study should include the revenue and jobs created locally and nationally, the importance of these ports to inland waterways shippers, the economic effects that would result from any single port closing down, the economic effects that would result from all ports closing down, the increase in barge traffic that these ports may see with the expansion of the Panama Canal, and the ability or inability of these ports to meet that expansion under the current funding environment. Finally, the study shall make a recommendation regarding the establishment of one funding stream for dredging these small inland ports as compared to historical funding mechanisms.

INVESTIGATIONS

Appropriations, 2015	\$122,000,000
Budget estimate, 2016	97,000,000
House allowance	113,000,000
Committee recommendation	109.000.000

The Committee recommends \$109,000,000 for Investigations, an increase of \$12,000,000 from the budget request. The Committee's recommendation allows the Corps of Engineers to begin up to 10 new feasibility study starts.

INTRODUCTION

Funding in this account is used to develop feasibility and PED studies to address the Nation's water infrastructure needs, in support of project authorization. The Committee is very concerned that only one-third of the budget request for Investigations is directed to specifically authorized studies, with the remainder directed to nationwide programs that will not result in construction recommendations. Further, the budget request proposes funding for only 51 specifically authorized feasibility studies, as compared to over 100 studies receiving appropriations in fiscal year 2015. Additional funding recommended for Investigations will allow a more balanced planning program.

The Committee is also concerned about the administration's failure to efficiently fund ongoing studies to completion, with completion being defined as the end of the PED phase. The budget request does not include funding to move any of the 34 feasibility studies that were completed in the prior fiscal year into the PED study phase. If the Committee were to adopt the budget request without modification, a backlog of at least 40 studies would be created from just the past 2 fiscal years. The Committee recognizes that the administration's budget does not provide adequate Investigations, and specifically PED funding to allow many of America's most important waterways to move efficiently from planning to construction. The Committee therefore recommends additional funding to be used to seamlessly continue feasibility studies into the PED study phase.

NEW STARTS

The Committee's recommendation includes funding for up to 10 new feasibility study starts. Each new feasibility study shall be selected based on the Corps of Engineers' prioritization process and included as a part of the Investigations work plan. Not less than 50 percent of the additional funds recommended for Investigations shall be used to seamlessly continue studies into the PED phase, which have a Chief's Report dated prior to October 1, 2015.

COMMITTEE RECOMMENDATION

The table below displays the budget request and the Committee's recommendation for Investigations. Funding is classified as either for feasibility or PED studies, as indicated in the columns, to provide greater transparency in the study phases.

Upper Mississippi River Comprehensive Plan.—The Committee understands that during the 2011 flooding on the Mississippi River, much of the damage was concentrated on the Upper Mississippi River Basin, where there is no final flood risk management plan. An appropriate Upper Mississippi River Comprehensive Plan would help work toward flood risk management goals. The Committee directs the Corps of Engineers to provide, not later than 60 days after the enactment of this act, a comprehensive survey of the authorization and funding requirements necessary for the Corps of Engineers to continue work on the Upper Mississippi River Comprehensive Plan, including work on alternative scenarios for the 500 year flood (included in the current plan, Plan H). The report shall also outline the perceived challenges to, and recommendations for, working toward the creation of an overall flood risk management plan for the entire main stem of the Mississippi River.

Mobile Harbor, Alabama Limited Reevaluation Report.—The Committee directs the Assistant Secretary of the Army for Civil Works [Secretary] to budget for this project at the rate indicated in Section 110 of the Energy and Water Development and Related Agencies Appropriations Act, 2015. In future budget submissions, the Secretary shall adhere to Congressional direction included in statute regarding this project. The Committee expects the Secretary to allocate funds provided in this act in a manner that is

consistent with statutory cost sharing requirements.

Upper Mississippi River-Illinois Waterway System.—The Committee recognizes that the bipartisan support for the Navigation and Ecosystem Sustainability Program [NESP], spanning almost a decade, has not resulted in NESP's implementation. The Committee recognizes that NESP is now so delayed that new economic and cost-benefit analyses must be performed before it can move forward. The Committee also recognizes that although the Corps of Engineers has reprogrammed funding into NESP, this funding has not been used to deliver updated analysis.

Consequently, the Committee directs the Corps of Engineers, not later than 30 days after the enactment of this act, to provide a report detailing the scope, schedule, and budget for delivering the updated economic analysis and cost recertification so the Corps of En-

gineers can begin implementing NESP.

Mud Mountain Dam.—The Committee commends the Corps of Engineers and the National Marine Fisheries Service for reaching agreement on a biological opinion [BiOp] to mitigate the impact of the ongoing operation of Mud Mountain Dam on species listed under the Endangered Species Act [ESA] by replacing the barrier structure and building a new fish trap facility. The Committee is aware that the Corps of Engineers is scheduled to complete the decision document in May 2015, which will inform design and construction work. The Committee encourages the Corps of Engineers to uphold its ESA and Tribal treaty responsibilities by requesting sufficient funding in future budgets to implement the BiOp requirements and complete construction by 2020.

Puget Sound Nearshore Study.—The Committee is aware that the Corps of Engineers completed public review on the draft Puget Sound Nearshore Feasibility Report and Environmental Impact Statement [Report] in December 2014. If the final Report does not

identify an implementable Federal project, the Committee encourages the Corps of Engineers to identify other existing authorities and resources that could assist with timely construction of alternatives included in the Report. The Committee further encourages the Corps of Engineers to acknowledge early action restoration efforts by the State of Washington as part of the overall plan, including cost share obligations when a project cost share agreement is executed.

Tribal Communities Located in Remote Areas.—The Committee recognizes that Tribal communities located in remote areas that experience severe, weather-related conditions that jeopardize public health and safety, face a significant disadvantage in the Corps of Engineers' utilization of benefit-cost ratios in the budgeting process. The Committee urges the Corps of Engineers to consider Federal trust and treaty obligations and the need to protect public health and safety in severe weather situations in determining fu-

ture budget priorities.

National Mall and Federal Triangle Flood Protection.—The Committee expects the Corps of Engineers to provide information and cooperate with other Federal agencies, the District of Columbia government, and nonprofit interests, including the National Coalition to Save Our Mall and Federal City Council, to address ongoing flood risks facing the Federal Triangle/National Mall area. The Committee directs the Corps of Engineers to provide unclassified information to the aforementioned interests for the purposes of developing a report on a proposed cost-neutral, public-private partnership approach to combine flood protection with underground visitor amenities and parking in order to address flood risks to the Federal Triangle/National Mall area, as well as the need to improve visitor access to National Mall museums, monuments, and activities.

Aquatic Nuisance Species.—The Committee is aware that the Corps of Engineers is capable of utilizing funding beyond what was in the administration's fiscal year 2016 budget request to further ongoing studies, including ongoing projects to address the threat of aquatic nuisance species in the Great Lakes Basin. The Committee encourages the Corps of Engineers to consider funding the program to address the threat of aquatic nuisance species in the Great Lakes Basin to its full capability in the fiscal year 2016 work plan.

The Committee further understands that under the Great Lakes and Mississippi River Interbasin Study, the Corps of Engineers has initiated a feasibility study to investigate near-term options and technologies to prevent the one-way transfer of aquatic nuisance species from the Mississippi River Basin into the Great Lakes Basin. Considering the pressing and potentially devastating harm aquatic nuisance species pose to the Great Lakes fishery and economy, the Committee is concerned that the Corps issued a waiver from the 3x3x3 rule to allow the feasibility study to take more than 3 years. The Committee believes that the Brandon Road Lock and Dam offers great promise as a single point to control the upstream transfer of aquatic nuisance species and that delays would be a major setback. Therefore, the Committee urges the Corps of Engineers to consider alternative ways to accelerate the feasibility study and to complete it within 3 years.

Research and Development, Additional Topic—Urban Flood Damage Reduction and Stream Restoration in Arid Regions.—The Committee encourages the Corps of Engineers' research and development [R&D] program to focus on the management of water resources projects that promote public safety; reduce risk; improve operational efficiencies; reduce flood damage in arid and semi-arid regions; sustain the environment; and position our water resource systems to be managed as systems and adaptable due to the implications of a changing climate. The R&D program should also continue its focus on science and technology efforts to address needs for resilient water resources infrastructure.

Export Terminals.—The Committee strongly encourages the Corps of Engineers to complete environmental review for export terminal projects as expeditiously as possible, in a transparent manner, and in a reasonable timeframe. In addition, the Committee directs the Corps of Engineers to thoroughly consult with the Secretary of the Interior, and all affected Tribal nations regarding the environmental and economic impacts as well as treaty rights of all Tribes affected by export terminal projects undergoing environmental review.

Additional Funding for Ongoing Work.—The Committee recommendation includes \$12,000,000 in additional funds for Investigations. From these additional funds, the Corps of Engineers is authorized to begin up to 10 new feasibility studies. The Corps of Engineers is directed to allocate these additional funds in accordance with the direction in the front matter under the heading "Fiscal Year 2016 Work Plan". Additionally, the Corps of Engineers shall comply with the following direction in allocating funds made available for Investigations:

Allocating funds for PED and new feasibility studies shall take priority over allocating funds for ongoing feasibility studies.

The Corps of Engineers shall not apply new start criteria to studies moving from the feasibility phase to the PED phase.

-The Corps of Engineers shall consider PED phase work as a continuation of the investigations and by definition, a study is

not completed until PED is completed.

When evaluating proposals for new feasibility studies, the Corps of Engineers should give higher priority to those studies that have an identifiable sponsor with the ability to provide any necessary cost share for the study phase, and are regional in scope, have the potential to provide greater national benefits; address endangered species concerns; or provide protection

to large numbers of our citizens.

When evaluating ongoing studies to propose for funding, the Corps of Engineers shall consider completing or accelerating ongoing studies which will enhance the Nation's economic development, job growth, and international competitiveness; studies located in areas that have suffered recent natural disasters; or studies for areas where revisions to flood frequency flow lines may result in existing infrastructure failing to meet the requirements under the National Flood Insurance Program.

The Corps of Engineers shall include appropriate requests for funding in future budget submissions for PED and new feasibility studies initiated in fixed year 2016.

bility studies initiated in fiscal year 2016.

—Funding shall be available for existing studies, including studies in the PED phase, that were either not included in the budget request or for which the recommendation in the budget request was inadequate. Ongoing studies that are actively progressing and can utilize the funding in a timely manner are eligible for these additional funds.

—The Corps of Engineers, in future fiscal years, shall prepare the budget to reflect study completions, defined as completion

of PED.

CONSTRUCTION

Appropriations, 2015	\$1,639,489,000
Budget estimate, 2016	1,172,000,000
House allowance	1,635,000,000
Committee recommendation	1,641,000,000

The Committee recommends \$1,641,000,000 for Construction, an increase of \$469,000,000 from the budget request. The Committee's recommendation allows the Corps of Engineers to select up to 6 new construction starts to begin in fiscal year 2016.

INTRODUCTION

Funding in this account is used for construction, major rehabilitation, and related activities for water resources development projects having navigation, flood and storm damage reduction, water supply, hydroelectric, environmental restoration, and other attendant benefits to the Nation. Funds to be derived from the Harbor Maintenance Trust Fund will be applied to cover the Federal share of the Dredged Material Disposal Facilities Program.

The Committee is concerned that the budget request is inadequate to meet the needs of projects that depend on funding from this account. Consequently, the recommendation includes

\$469,000,000 in additional funding for ongoing work.

NEW STARTS

The Committee recommends up to 6 new construction starts, including the 4 proposed in the budget request.

INLAND WATERWAYS TRUST FUND

The Committee recognizes the administration has not had adequate time to react to the Inland Waterways Trust Fund [IWTF] revenues that were expanded by the passage of the Able Act and expanded authority received in the Water Resources Reform and Development Act of 2014 [WRRDA]. Therefore, the Committee recommends an additional \$108,600,000 for inland waterway projects to continue with construction on the priority projects as designated in the Inland Marine Transportation Systems [IMTS] Capital Projects Business Model Final Report, dated April 13, 2010. The Committee is aware that the Corps of Engineers is developing a new report describing a 20-year program for making capital investments on the inland and intracoastal waterways, pursuant to

WRRDA section 2002(d). This report is due to be submitted to Congress in June 2015. The Committee requires an opportunity to review any new report prior to the Corps of Engineers incorporating any part of the report into funding decisions. Therefore, when allocating the fiscal year 2016 additional funding provided in the Remaining Items—Inland Waterways Trust Fund Projects account, the Corps of Engineers shall not use the report being developed pursuant to WRRDA. The Corps of Engineers shall continue to use, as appropriate, the IMTS report as the applicable 20-year plan.

With the exception of the Olmsted Locks and Dam project on the Ohio River between Kentucky and Illinois [Olmsted project], the construction and major rehabilitation of designated projects for inland and coastal waterways derives one-half of the funding from the IWTF and one-half of the funding from the General Treasury. All funds are appropriated in the Construction account. The cost sharing for the Olmsted project has been modified from the traditional 50/50 cost share to 85 percent from the General Treasury and 15 percent from the IWTF. The net effect of this change allows additional investments on other inland waterways projects that are cost shared with the IWTF. The Committee expects the administration to address these increased investment opportunities for the inland waterways system in future budget submissions.

Chicago Sanitary and Ship Canal Dispersal Barrier, Illinois.— The issue of hydrologic separation should be fully studied by the Corps of Engineers and vetted by the appropriate congressional authorizing committees and specifically enacted into law. No funds provided in this act may be used for construction of hydrologic separation measures.

Aquatic Plant Control Program.—The Committee recommendation includes \$4,000,000 for this program, which is the only nationwide R&D program to address invasive aquatic plants. The Committee urges the Corps of Engineers to continue to support cost

shared aquatic plant management programs.

Charles M. Russell National Wildlife Refuge.—The Corps of Engineers has completed the final cabin sale at the Charles M. Russell National Wildlife Refuge. The Committee instructs the Secretary to reconcile all remaining funds in accordance with the Charles M. Russell National Wildlife Refuge Enhancement Act of 2000. The Committee requests final accounting of the proceeds and administrative costs reimbursed to the Corps of Engineers under 808(b)

within 1 year of enactment of this act.

Continuing Authorities Program.—The Committee recommends \$20,500,000 for the Continuing Authorities Program [CAP], an increase of \$17,000,000 from the budget request. CAP is a useful tool for the Corps of Engineers to undertake small localized projects without being encumbered by the lengthy study and authorization phases typical of most Corps of Engineers projects. The standing CAP authorities are: flood control (section 205), emergency streambank and shoreline protection (section 14), beach erosion control (section 103), mitigation of shore damages (section 111), navigation projects (section 107), snagging and clearing (section 208), aquatic ecosystem restoration (section 206), beneficial uses of dredged material (section 204), and project modifications for improvement of the environment (section 1135). The Committee has chosen to fund seven of the nine sections rather than only the four sections proposed in the budget request. The Committee has not recommended funding for section 208, as these projects can be accommodated under the authority of section 205. The Committee has not recommended funding for section 103 because the Corps of Engineers is projecting an \$8,000,000 carryover of unobligated balances from prior appropriations.

The Committee urges the administration to execute the CAP program laid out by the Committee and include sufficient funding for this program in future budget requests. The Corps of Engineers shall continue the ongoing processes for initiating, suspending, and terminating projects. Suspended projects shall not be reactivated or funded unless the sponsor reaffirms in writing its support for the project and establishes its willingness and capability to execute its project responsibilities. The Chief of Engineers shall provide an annual report within 60 days of the end of each fiscal year detailing the progress made on the backlog of projects. The report shall include the completions and terminations as well as progress of ongo-

ing work.

Restoration of Abandoned Mines.—The Corps of Engineers is directed to continue working closely with Federal land management agencies, western States, and Tribes with abandoned non-coal mine sites to cost-effectively address the greatest number of those sites presenting throats to public health and cofety.

presenting threats to public health and safety.

Public-Private Partnerships.—The Committee notes that the Secretary and the Chief of Engineers expressed strong support for a public-private partnerships [Partnership] as a method to reduce the Federal cost of future construction projects. The acronyms P3, P4,

etcetera are interchangeable and represent the number of public and/or private entities that comprise the Partnership. The Committee believes the Corps of Engineers should demonstrate the value of projects that use a Partnership model and directs that, of the six new construction starts, at least one shall be either a navigation or flood risk management project that utilizes such a Partnership. The Committee further directs that the selected Partnership project should have a Chief's Report showing a benefit-cost ratio greater than one for the Federal investment only, but shall not be subject to any other restrictions applicable to traditional construction new starts to ensure that multiple projects qualify for selection as a Partnership project.

Reimbursements.—The Committee directs the Secretary to prioritize the Corps of Engineers' reimbursement obligations based on projects with signed project cooperation agreements. The Secretary shall demonstrate plans for the additional funding provided by Congress to meet the project cooperation agreement and Federal

Government's fiscal responsibilities.

Metro East Saint Louis, Illinois.—This levee rehabilitation project will help protect communities in the Metro East region from rising waters on the Mississippi River. The non-Federal sponsors remain very interested in continuing implementation of the project, have raised sufficient cost-share, and should be given heightened cooperation by the Corps of Engineers. The Committee urges the Corps of Engineers to enter a cost share agreement with the non-Federal sponsors.

Melvin Price Lock and Dam, Illinois and Missouri.—The length of time it is taking the Corps of Engineers to rectify the seepage problems that the impoundment of the navigation pool is causing to the Wood River Levee, as well as escalating cost estimates, continues to be troublesome. The Corps of Engineers is encouraged to ensure that the Independent External Peer Review and oversight of this project continues and is conducted in a manner that will not

lengthen an already long schedule.

Additional Funding for Ongoing Work.—The Committee recommendation includes \$469,000,000 in additional funds for Construction. The Corps of Engineers is directed to allocate these additional funds in accordance with the direction in the front matter under the heading "Fiscal Year 2016 Work Plan". Additionally, the Corps of Engineers shall comply with the following direction in al-

locating funds made available for Construction:

- —Additional considerations include whether the project is positioned to permit award of significant items of construction, achieve necessary milestones, or otherwise realize notable construction progress in fiscal year 2016; and the project sponsor expended funds under an existing Project Partnership Agreement for creditable work, including acquisition of rights-of-way.
- —None of these funds shall be used for projects in the Continuing Authorities Program.
- —Funding may be for all categories including periodic beach renourishments and reimbursements.
- —Funding may be made available to projects for which the sponsor is awaiting reimbursement from the Federal Government

to continue with construction of remaining authorized project features.

In prioritizing projects for environmental infrastructure assistance, the Committee recognizes that these authorities were originally created to assist communities that were unable to compete well in the Statewide revolving fund authorities under the jurisdiction of the Environmental Protection Agency. While the Committee believes it is appropriate to prioritize those projects with the greater economic impact, it recognizes that such rigid criteria may exclude rural underserved communities with greater needs and projects located in towns, cities, and municipalities experiencing compliance difficulties with Federal environmental regulations. When allocating these funds, the Committee encourages the Corps of Engineers to consider counties or parishes where the average family income is below the national poverty level.

MISSISSIPPI RIVER AND TRIBUTARIES

Appropriations, 2015	\$302,000,000
Budget estimate, 2016	225,000,000
House allowance	275,000,000
Committee recommendation	330,000,000

The Committee recommends \$330,000,000 for Mississippi River and Tributaries, an increase of \$105,000,000 over the budget request. Funds recommended in this account are for planning, construction, and operations and maintenance activities associated with water resource projects located in the lower Mississippi River Valley from Cape Girardeau, Missouri to the Gulf of Mexico.

The table below displays the budget request and Committee's recommendation:

TOTAL, MISSISSIPPI RIVER AND TRIBUTARIES	225,000	275,000	330,000	+ 105,000	+ 55,000

The Committee's recommendation includes not less than \$1,000,000 for the competitive procurement of modern land sur-

veying equipment for Corps of Engineers districts.

Additional Funding for Ongoing Work—Flood Control.—Within the amounts available for flood control, the Committee recommendation provides not less than \$25,000,000 for ongoing construction projects outside of the Lower Mississippi River main stem that were not included in the administration's request, and which provide benefits and value to the Nation.

Additional Funding for Ongoing Work—Other Authorized Purposes.—Within the amounts available for other authorized purposes, the Committee recommendation provides not less than \$3,000,000 for maintenance projects with recreational or environmental stewardship components. Funding associated with this category should be used to perform routine and non-routine operations and maintenance of facilities that are both recreational and educational, or to continue management of mitigation features in order to meet requirements set forth under the Corps of Engineers' plans.

Additional Funding for Ongoing Work—Dredging.—In considering dredging projects for funding, the Corps of Engineers shall give priority to annual tonnage and the total work capability that can be completed in fiscal year 2016.

OPERATIONS AND MAINTENANCE

Appropriations, 2015	\$2,908,511,000
Budget estimate, 2016	2,710,000,000
House allowance	3,094,306,000
Committee recommendation	2,909,000,000

The Committee recommends \$2,909,000,000 for Operations and Maintenance, an increase of \$199,000,000 over the budget request.

INTRODUCTION

Funding in this account is used to fund operations, maintenance, and related activities at water resource projects that the Corps of Engineers operates and maintains. These activities include dredging, repair, and operation of structures and other facilities, as authorized in the various river and harbor, flood control, and water resources development acts. Related activities include aquatic plant control, monitoring of completed projects where appropriate, removal of sunken vessels, and the collection of domestic waterborne commerce statistics.

COMMITTEE RECOMMENDATION

The table below displays the budget request and Committee's recommendation for Operations and Maintenance.

Lowell Creek Tunnel, Alaska.—The Committee recognizes the current problems with the existing Lowell Creek Tunnel and encourages the Corps of Engineers to undertake a study for an alternative method of flood diversion for Lowell Canyon. The Water Resources Development Act of 2007 transferred operations and maintenance to the Corps of Engineers until a new alternative was built, or for 15 years, whichever was earlier. This bill includes a general provision to extend the Corps of Engineers' operation and maintenance responsibility for this project for another 5 years. The Corps of Engineers has not progressed towards developing an altername

native, and the City of Seward cannot afford the estimated \$1,500,000 per year in operations and maintenance costs of the tunnel.

Missouri River Fish and Wildlife Recovery.—It has come to the Committee's attention that the Corps of Engineers has listed the Missouri River Fish and Wildlife Recovery program under the navigation business line. The Missouri River Fish and Wildlife Recovery program is associated with flood plain mitigation and compliance with endangered species protection requirements. The Committee seeks to understand how these activities relate to the promotion of navigation. The Corps of Engineers has recently classified the program under the navigation business line. The Committee directs that, within 60 days of the date of enactment of this act, the Corps of Engineers shall submit to the Committee the reasons for this classification. The Corps of Engineers shall describe its plans to ensure that it does not impact anticipated or needed work under the Bank Stabilization and Navigation Program.

WRRDA Section 1039—Invasive Species.—Funding is provided for watercraft inspection stations, as authorized by WRRDA section 1039. The Secretary, in consultation with the States of Idaho, Montana, Oregon, and Washington, is required to establish watercraft inspection stations in the vicinity of reservoirs operated by the Corps of Engineers, including for boat inspection stations in the Columbia River Basin States. These inspection stations are the principal line of defense against the spread of aquatic species at reservoirs operated and maintained by the Secretary, such as entry of zebra and quagga mussels into the Flathead Basin in Montana.

Monitoring of Completed Navigation Projects.—The Committee recommends additional funding for the Corps of Engineers to monitor aging navigation infrastructure to ensure that it continues operating as planned.

Operations and Maintenance—Fisheries.—The Committee is concerned that a reduction in or elimination of navigational lock operations is having a negative impact on the ability of a number of endangered, threatened, and game fish species to migrate through waterways, particularly during critical spawning periods. The Committee is aware of preliminary research that indicates reduced lock operations on certain Corps of Engineers' designated low-use waterways is directly impacting migration and that there are effective means to mitigate the impacts. The Committee believes maximizing the ability of fish to use these locks to move past the dams has the potential to restore natural and historic long-distance river migrations that may well be critical to species survival. The Committee provides \$2,000,000 to continue external fish behavior research to determine the appropriate time, frequency, and number of mitigation lockages; how to increase the numbers of fish entering locks during navigational and mitigation operations; and how to get fish to stay in locks for the optimal period of time. This research should be conducted in coordination with both the Corps of Engineers and the Fish and Wildlife Service.

Levels of Service.—The Committee is aware of recent decisions to reduce service levels at locks across the country. The Committee notes that the Corps of Engineers is authorized to open locks independently of the established levels of service [LoS] for specific and

unique activities where such opening and closing will be advantageous to fostering economic and community development. The Committee remains concerned about limited budgetary resources for infrastructure improvements on the Nation's locks and dams, and encourages the Corps of Engineers to consider all options within its statutory authority to collect additional funds. Such efforts should include acceptance of contributed funds under existing authorities, to maintain robust lock operations. Such efforts should also include public-private partnerships, which include State agencies, to ensure locks are safe and operational for economic growth and community development. Local economies benefit from using locks and dams for commercial and recreational uses that are unrelated to commercial barge traffic. The Committee acknowledges that the Corps of Engineers has given local communities assurances that, within its current statutory authority, the Corps of Engineers will be sensitive to economic impacts on local economies.

Dam Optimization.—The Corps of Engineers is urged not to carry out any reservoir reoperation or reallocation for authorized purposes at Corps of Engineers' facilities with funds from any non-Federal entity other than the non-Federal sponsor until the Corps of Engineers has completed all public outreach and coordination, and submitted to the relevant authorizing and appropriations Committees, and the Congressional delegation representing such facility, a detailed analysis of the change in operations of the reservoir, and specific information on whether the activities would alter availability of water for existing authorized purposes at such facility, as well as compensation for lost water that would be necessary to make users whole if such activities were carried out.

Western Drought Contingency Plans.—The Committee notes that the Corps of Engineers carries out water control management activities for Corps of Engineers and non-Corps of Engineers projects as required by Federal laws and directives, and that these activities are governed by the establishment of water control plans. The Committee understands that many of these plans and manuals were developed decades ago and are required to be revised as necessary to conform to changing requirements. Continuous examination should be made of regulation schedules and possible need for storage reallocation within existing authority and constraints. Em-

phasis should be placed on evaluating current or anticipated conditions that could require deviation from normal release schedules as part of drought contingency plans.

Not later than 90 days after enactment of this act, the Secretary shall provide to the Committee a report including the following information for any western State under a gubernatorial drought declaration during water year 2015: (1) a list of Corps of Engineers and non-Corps of Engineers (section 7 of the 1944 Flood Control Act) projects that have a Corps of Engineers developed water control plan; (2) the year the original water control manual was approved; (3) the year for any subsequent revisions to the project's water control plan and manual; (4) a list of projects where operational deviations for drought contingency have been requested and the status of the request; (5) how water conservation and water quality improvements were addressed; (6) a list of projects where
